

FONE*Data

The right connection is a good connection... to your customers

This unique telephone Area Code/Prefix database provides the most up-to-date phone number information for the U.S. and Canada. Use it with your custom applications to maintain your telemarketing program, link phone numbers to geographic data, and set up a dealer locator system for your customers.

Cross Reference Area Codes & ZIP Codes

FONE*Data allows you to match up telephone numbers to ZIP Code™ data. The database includes up to three commonly used ZIP codes for each area code and prefix combination. Although there is no exact match between ZIP codes and telephone numbers, this does allow you to form some loose geographical associations.

No Surprise with New Area Codes

Use FONE*Data to avoid the frustration that occurs when area codes change or split. Each quarterly update contains the existing, or old area codes, along with the new area codes scheduled to replace them. You'll be talking to your customers while the competition is calling information for the new numbers.

Powerful Programmer's Tool

FONE*Data provides an excellent way to add valuable marketing and location data to your existing records based on telephone numbers. Give your custom programs the ability to relate area code and prefix data to location information like city, state, county, time zone, and latitude/longitude coordinates. Improve customer service and increase accuracy by writing a program that uses a customer's phone number to automatically insert the correct city and state combination into each record. FONE*Data also contains Metropolitan Statistical Area (MSA) to help you better target your customers.

Features:

- Updates quarterly
- Includes Lat/Long coordinates
- Updates U.S. & Canadian numbers
- .csv (comma delimited) format

Requirements:

- Windows 2000 or XP
- 9MB hard disk space
- CD-ROM drive

- Reduce keystrokes at data entry
- Increase phone number accuracy
- Automatically correct area codes
- Find nearest dealer to a customer
- Link area code/prefix to ZIP codes
