

WebSmart Global

International address verification & correction

WebSmart Global provides you an international address data quality solution to ensure you have accurate information from over 240 countries and territories. Designed to meet the needs of every user, you can capture, validate, and cleanse addresses for the entire world.

WebSmart Global is designed for U.S. based customers with a subset of International records that can be accessed for processing 24/7/365 via secure connections (SSL).

- Addresses formatted to the postal standards of respective country
- English (Latin characters only) returned
- SOAP, XML, REST interfaces

Address Validation for Direct Marketing, Postal & Delivery Services

Increase response rates, lower shipping costs and increase overall effectiveness of your direct marketing initiatives with correct and up-to-date addresses. Postal standards and address formats are different from country to country. Not only the correct elements of an address, but also their hierarchical alignment play a big role in the accuracy of the address format. Sophisticated technology, expertise and knowledge easily resolve this problem and ensure formats are consistent with postal standards.

- The more international your records, the more likely you are to have problems. Whether canton, county, state, province, or prefecture, WebSmart Global knows what to do and handles the details.
- Misaddressed mail or double delivery looks careless and incompetent. An incorrect address results in additional costs due to investigation, delays in delivery, return fees, remail/reship postage, and even lost customers.

Address Validation for E-Commerce

Optimize online transactions with the help of WebSmart Global. Postal addresses are validated directly during the customer registration or purchase process. Only once the address is correct can the procedure be continued. This function enables capture of the correct billing and delivery addresses from the start and eliminates unnecessary costs for additional corrections or returned goods. WebSmart Global makes it possible to:

- Verify address data without entering credit card information
- Ensure deliverability with shipping internationally or to an address other than the billing address
- Provide a supplemental service to customers
- Improve customer retention
- Prevent incorrect addresses from reaching your online database

Benefits...

- One solution for all countries
- Enhance direct marketing effectiveness
- Improve customer retention
- Simplify daily handling of addresses
- Ensure dependable information for ERP and CRM systems
- Streamline operational processes
- Save money on returned shipments & mail pieces
